

PLOTCLAIM

Claiming Your Plot

Pick your own ground anywhere in the world and claim it. One command, no staff, no waiting - and it grows with you as you rank up.

COMMAND	FROM RANK	PLOTS EACH	GROWS ON RANK-UP
<code>/claimplot</code>	Mystic	one, forever	yes

THE WHOLE SETUP, IN ORDER

- 1 Check your size
- 2 Stand in the middle
- 3 Claim it

1 Check your size

Run `/claimplot info`. It tells you how big a plot your rank gets, so you know how much room to leave around you.

Mystic	20 x 20
Hero	25 x 25
Champion	30 x 30
Legend	35 x 35
Ancient	40 x 40
Veteran	60 x 60 - the largest on the server

2 Stand in the middle

The plot is built around wherever you are standing, so put yourself at the exact centre of where you want to live before you run the command.

3 Claim it

Run `/claimplot <name>` - for example `/claimplot riverhold`. Names are 3 to 32 characters and can use letters, numbers, - and _ only.

You become the owner, so you can add friends yourself with `/rg addmember <plot> <player>`.

i If the spot is refused, nothing is used up

The message names whatever you collided with, so you know which way to move. Your one claim is only spent on success - walk a few blocks and try again as often as you like.

Plots cannot overlap another claim, sit within 16 blocks of one, or sit within 10 blocks of a town. Give towns a wide berth and you will rarely be refused.

What your plot gives you

Full height	Protected from bedrock to sky - nobody tunnels under or builds over you.
Blast proof	Creepers, TNT, ghastrs, withers, fire and lava cannot touch the terrain.
PvP is ON	Fighting is still allowed on your plot. Protection covers blocks, not you.

Ranking up makes it bigger

You get one plot, whatever your rank, forever. A higher rank does not give you a second one - it lets you grow the one you have.

Run `/claimplot resize` and the edges move outward. The centre, the name, your members, and everything you built stay exactly where they are. You get a one-line nudge in chat when a resize becomes available.

i Your plot can never shrink

Shrinking is deliberately impossible. If your rank lapses your plot stays exactly the size it is, and nothing you built is ever deleted.

Commands

<code>/claimplot <name></code>	Claim your plot, centred on where you stand
<code>/claimplot info</code>	Your plot, its size, and whether a bigger one is available
<code>/claimplot resize</code>	Grow it to your current rank's size
